Australia's uranium industry has exported over 208,000 tonnes of uranium oxide, resulting in the production of:

- over 30,000 tonnes of high-level nuclear waste (spent nuclear fuel);
- over 150 tonnes of plutonium (enough to build approx. 15,000 nuclear weapons);
- over 110,000 tonnes of depleted uranium;
- over 200 million tonnes of low-level radioactive mine tailings waste and over 255 million tonnes of radioactive low-grade ore and waste rock.
